WHAT WE DO

Envistacom supplies technologies and infrastructures that support the reliable, secure transmission of information at the speed of need.
Connected and Resilient

Communications is at our core. From Envistacom’s beginnings, we’ve specialized in providing government agencies with satellite and wireless communications networks and infrastructure.

Today, we continue to build resilient solutions that address the real-world challenges our customers face in the battlefield. In ongoing or short-term engagements, we provide strategic and tactical C5ISR, satellite communications (SATCOM), and systems integration with full lifecycle support.

Most of our technical experts are former U.S. military leaders — making them personally invested in ensuring warfighters have reliable access to critical information when they need it.

SYSTEMS INTEGRATION
Envistacom mitigates risk and delivers high-performance solutions for battlespace communications.

MANAGED SERVICES
Dedicated personnel deliver operations, maintenance and sustainment support for long-range mission requirements.

TECHNOLOGY
Innovation through intellectual curiosity, collaboration and an open-ecosystem mindset enables new capabilities to reach users faster.

PROFESSIONAL SERVICES
Domain experts provide concentrated and customized support for pressing communications challenges.
CAPABILITIES & SOLUTIONS

SYSTEM DESIGN & INTEGRATION
- Satellite Ground Terminals
  - STT (AN/TSC-185C)
  - Phoenix-E (AN/TSC-156E)
  - Mobile Gateway
  - RHN/THN
  - Teleports
- Cellular Systems
- System Integration
- Field and Factory Upgrades
- End of Life (EOL) monitoring & replacement
- ARSTRAT certification
- Sparing

MANAGED SERVICES
- Field Service Representative
- Logistic Support
- Subcontractor Management
- Integrated Training (inhouse and remote)
- Validation and Integration
- Production Manufacturing
- System Development
- Production, deployment, and installation
- Sustainment and Support

NETWORK TECHNOLOGIES
- Cloud Network design service
- Value Added Reseller (VAR) of Network equipment
- Network / IT specialists

LEASED SERVICES
- “Lightning” satellite communications leased service
- Satellite terminal leased service

ADVANCED TECHNOLOGIES
- SBIR Technology Development
- Virtualization Product Development
- Specialized Antenna Development
